

Ceiling Grid

Bergvik's Iso Flex-Grid is an engineered ceiling system that provides an overhead structure to support technical infrastructure in information technology, education, healthcare, industrial, retail, and other sectors. The flexible design ceiling system can tailor to meet all project-specific requirements.

WHY DO YOU NEED A STRUCTURAL CEILING IN YOUR DATA CENTER?

- Cost-effective, dual-purpose system that functions as both an acoustic and structural ceiling
- Allows you to pre-design and specify the support solution in advance
- Addresses modern data center requirements: cost, easy integration, flexibility and eliminate future design limitations
- Improve installation and project timelines, air leakage, and equipment protection

KEY FEATURES

- Continuous threaded slot
- Support structure for all overhead services and fixtures
- Accessible, adaptable, and flexible
- Customized configuration (load requirements, grid size, and product finish)

MAXIMUM LOAD CAPACITY

The Iso Flex-Grid's unique design allows for the highest load rated structural ceiling solution available in the market, making it the preferred selection for facilities in need of additional optimization.
