

Containment

The Enconnex hot and cold aisle containment systems focus the flow of cold air on the IT equipment, while minimizing any mixing with the hot exhaust air. Isolating hot and cold air not only reduced the operational costs associated with cooling, but also allows for greater equipment densities. Rahy offers a variety of aisle containment solutions, including rigid aluminum, metal, and fiber-reinforced plastic products.

APPLICATION

- Data Center
- High-density applications
- Energy rebate programs

PRODUCT FEATURES

- Eliminates hot and cold air mixing
- Works in both raised-floor and slab environments
- Increases cooling capacity
- Improves airflow
- Energy savings
- Less investment, yielding more savings
- Maximizes data center cooling efficiencies
