DefenseShield™ RF Shielding Cabinet for Efficient Mobile Device Testing

DefenseShield allows a dense installation of wireless devices (400 phones) while eliminating interference and providing cooling, allowing for:

Testing websites across a multitude of devices and operating systems

Testing apps in development

Testing cybersecurity threats

Why Choose DefenseShield for Mobility?

CONFORMANCE

This UL listed cabinet provides for high level EMI performance, giving you assurance that device testing over Wi-Fi, cellular, Bluetooth, Zigbee, and others are clear of stray signal noise from adjacent cabinets.

ADAPTABILITY

Allows for a variety of data and power connections to adapt to your changing and growing device testing needs.

KEEPS COOL

Provides sufficient airflow for more than 10kW of device heat load by use of 10 powerful long-life fans.

Key Attributes

QUALITY AND LIGHTWEIGHT DESIGN

DefenseShield is the very highest-performance product with durable, rugged construction. At 376 lbs., DefenseShield is exceptionally lightweight, making shipping, integration, and installation significantly easier. Most competitor products are plated steel or stainless steel construction making the product too heavy for offices or data centers.

COST

Many of the high-performance competitors are 50%-100% more expensive.

CUSTOMIZATION AND EXTRA FEATURES

Through Enconnex, customers can select various shelves, power options, network cabling, etc., from one vendor.
